# 10th European Panel Products Symposium
## 11, 12, 13 October 2006
### Table of Contents

**Keynote Address:**

*Our Global Business*

*Mark Irle* .................................................................................................................. 1

**Session 1: Fundamentals**

*John Sharp* .................................................................................................................. 11

New Opportunities for the Microstructural Analysis of Wood Fiber Networks

*T. Walther, H. Thoemen, K. Terzic and H. Meine* ........................................ 23

CTMP versus TMP in Moisture Resistant Bonded MDF

*E. Roffael, B. Dix, U. Hennecke, D. Krug and B. Stephani* ....................... 33

Co-Polymerization Studies of Wood Resins Using $^{15}$N-NMR Correlation Spectroscopy

*A. Philbrook, S. Ernshaw, C.J. Easton and M.A. Keniry* ............................ 47

High Strength Resin Impregnated Compressed Wood: Fundamental Analysis and Future Applications

*Md.I. Shams and H. Yano* .................................................................................. 59

**Session 2: Resins and Emissions**

Resins in Europe (For Particleboard, MDF and OSB)

*Manfred Dunky* ......................................................................................................... 69

Trends in Indoor Air Quality Legislation and Monitoring – Could You Be Affected?

*Adele Brooksbank* ................................................................................................. 79

Study of Volatile Organic Chemical Emissions From a MDF Pilot Plant

*Alpha Barry* ............................................................................................................. 89

Measurement and Health-Related Evaluation of Volatile Organic Compound Emissions from OSB Made of Scots Pine

*M. Makowski and M. Ohlmeyer* .............................................................................. 99

Online Measuring Method for the Fast Determination of Formaldehyde Emission

*E. Hoferichter, K. Aehlig and S. Tobisch* .............................................................. 109
Penetration and Diffusion Behaviour of Isocyanate Based Adhesives into Wood and its Beneficial Impact on Panel Performance

*C. Phanopoulos and S. Baker* ................................................................. 123

**Session 3: Raw Materials and Preparation**

Zen and the Art of Making MDF

*Kelvin Chapman* ............................................................................. 135

Dependence of Fines Generation From Flaking Wood on Temperature and Knife Angle

*S. Banerjee and T.E. Conners* ......................................................... 147

Innovative Separation Techniques for Better Particleboards made of Waste Wood

*P. Meinlschmidt and T. Gruber* ....................................................... 155

Commercialisation of Cereal Straw Based Structural Panels in North America

*Wayne Wasylciw* .............................................................................. 165

**Session 4: The Built Environment**

Asia Pacific Wood-Based and Biocomposites Industry: Prospects and Challenges with Special Focus on Malaysia

*J. Harun and Md. B. Hamzah* .......................................................... 177

Natural Building – A Win-Win Possibility

*Tom Woolley* .................................................................................. 191

The Coming of Age of Timber Frame Construction in the United Kingdom

*Joe Martoccia* .................................................................................. 205

Reduction in Shear Capacity of Wood Structural-Use Panel Diaphragms and Shear Walls Due to Overdriven and Embedded Fastener Nailheads

*A.E. Gjinolli, J.J. Vogt and D. Bower* .............................................. 207

**Session 5: Process Control**

New Methods to Determine Fibre Quality for MDF-Production

*M. Ohlmeyer, J. Hasener and H. Schmid* ........................................ 221

How Technical Solutions for Online Measurement Meet the Increased Speed of Panel Board Production Lines

*M. Fuchs and H. Kleinschmidt* ....................................................... 233

Online X-Ray Inspection: Optimisation Potentials in the Forming Process Experiences of a User Regarding Efficiency

*K. Greten and B. Bergmann* ............................................................. 243
Automatic Visual Monitoring of the Physical and of the Aesthetical Quality of Bare and Decorated Panels in the Production Line

Robert Massen ................................................................. 249

Optimal Surface Smoothness Regimes for Rubberwood Medium Density Fibreboard (MDF)

J. Ratnasingam and E. Francis ............................................. 259

Modelling of Hot Pressing of MDF

A. Gupta, P.J. Jordan, S. Pang and K.M. Chapman ................. 265

Poster Session

Effect of Rice Husk Modifications on Water Absorption Resistance of Rice Husk Based Panels

B.S. Ndazi, C. Nyahumwa, J.V. Tesha and S. Karlsson .............. 279

Solid Binder Materials as Promising Alternatives for Liquid Resins in the Gluing of Wood Based Panel Products for Special Applications

V. Mandl, G. Wuzella, F. Obermair, W. Schnitzhofer, A. Kandelbauer .... 287

Microwave Processing of Wood: The Design of Commercial Plant

P. Vinden, G. Torgovnikov, P. Blackwell, J. Hann and A. Shaginov .... 291

Value-Adding Strategies for Wood Based Panels Manufacturing in South East Asia

J. Ratnasingam and C.Y. Yoon .............................................. 299
